

ARK

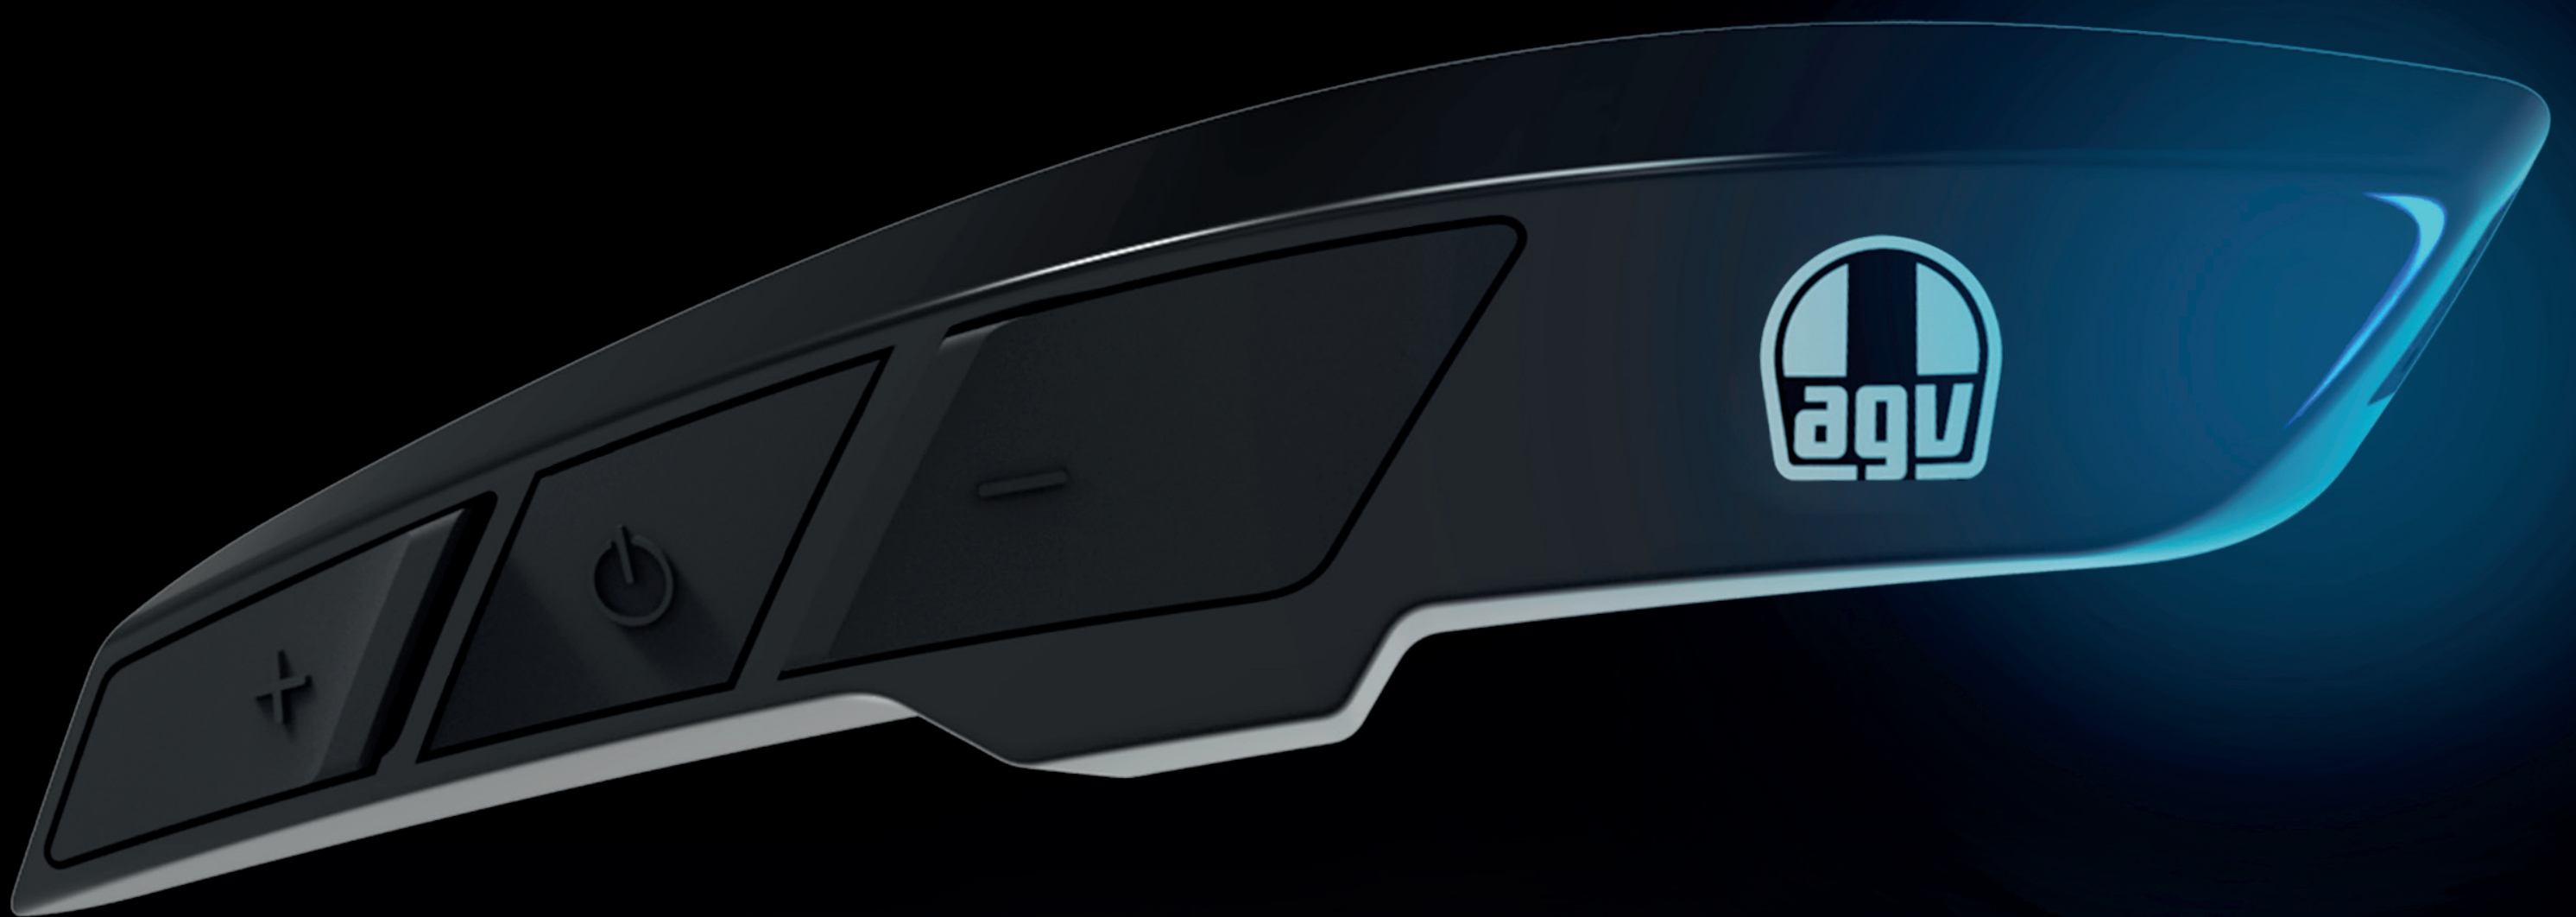

AERODYNAMIC
COMMUNICATION
SYSTEM
FOR AGV HELMETS

ARK, STAY CONNECTED EVERYWHERE

AGV ARK is here and ready to change your ride. Simultaneous communication between up to 4 riders, with only the click of a button. Designed specifically for AGV helmets, it allows to talk to riding companions up to 1.6 km (1.0 mile) away, take calls, listen to music and more.

CRYSTAL CLEAR AUDIO AND ADVANCED NOISE CONTROL™

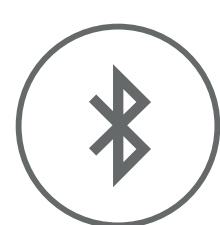

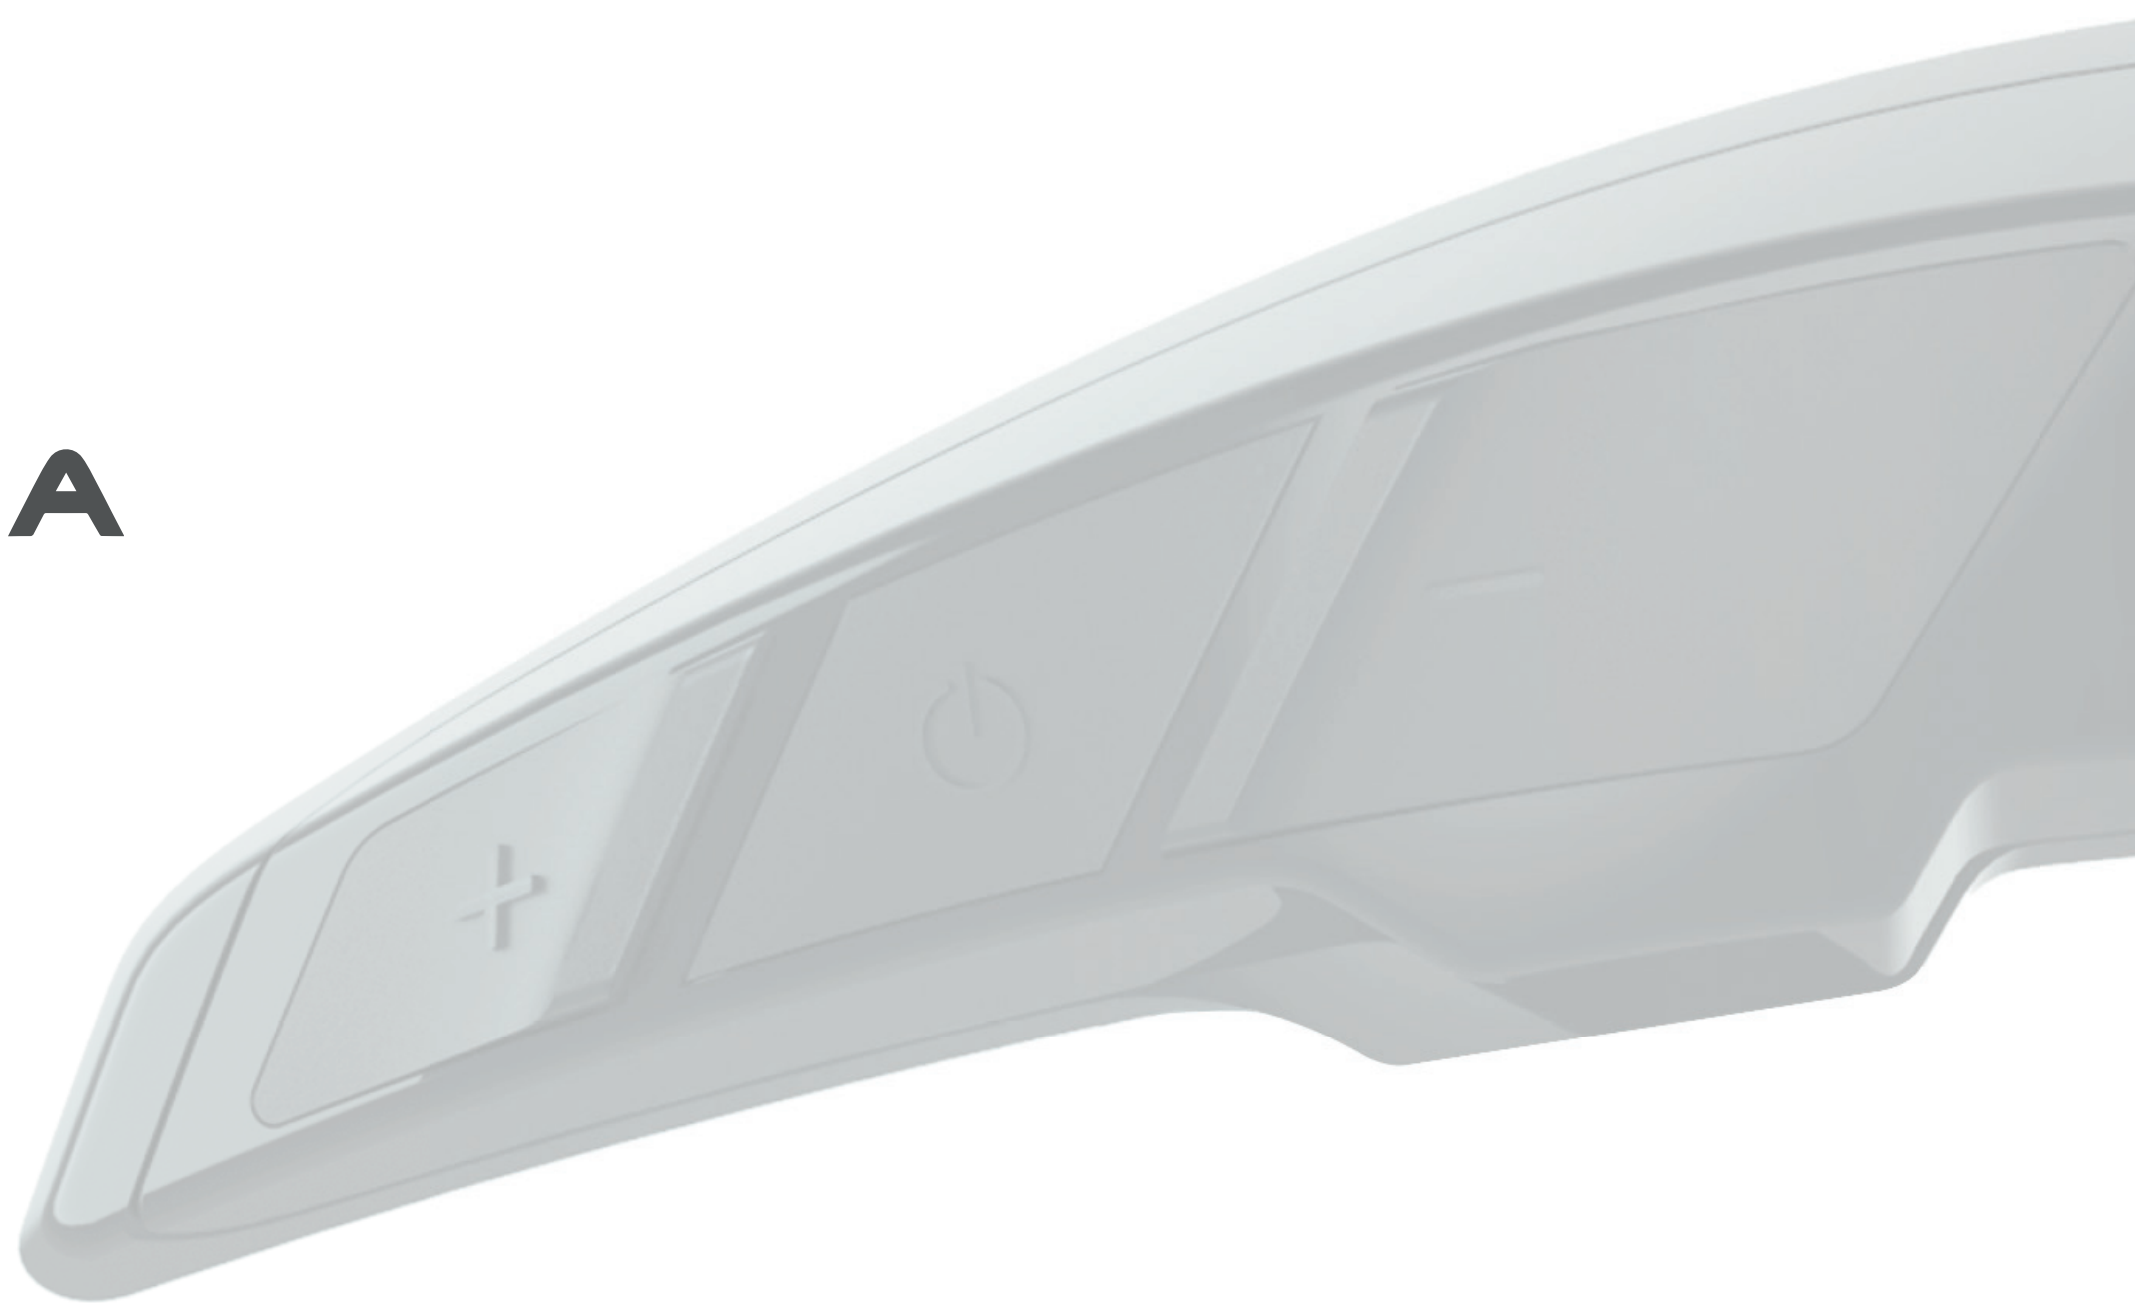

Even at high speed, listening to music or GPS navigation from smartphones is simple, thanks to the upgraded speakers in the ARK headset. Whether talking over the intercom or taking a phone call, Sena's Advanced Noise Control™ and the superior quietness of AGV helmets ensure ambient noise doesn't interfere with incoming and outgoing audio.

AGV UNIQUE DESIGN AND VERSATILITY

ARK intercom has a dynamic and streamlined design, engineered for a perfect integration with Sportmodular, AX9, K5 S and K6 AGV helmets without interfering with their aesthetic and aerodynamic shape. Light and compact, it can be applied on the helmet simply using the AGV Intercom Adapter.
